

Investment Objective & Strategies

The investment objective of the Fund is to seek long-term capital appreciation. Under normal market conditions, the Fund invests at least 80% of its total assets in stocks of small capitalization (“small cap”) companies. The Fund defines small cap companies as companies with market capitalizations that are consistent with the market capitalizations of companies in the Russell 2000 Index.

Investment Process

TCM uses fundamental research to identify companies with the potential for superior earnings growth and sustainable valuations. TCM’s intensive bottom-up, fundamental research drives stock selection, which TCM believes is most likely to generate excess returns. The investment process uses a team-oriented approach, where members of the team leverage the expertise of their colleagues in an environment that facilitates the exchange of ideas and insights.

Portfolio Manager

Richard J. Johnson, CFA

Richard Johnson is the chief investment officer of Tygh Capital Management and the portfolio manager of the Fund. Prior to joining Tygh Capital Management, he served as senior vice president and chief investment officer for Columbia Management Advisor’s equity team in Portland, Oregon, and the portfolio manager of the small cap team. Mr. Johnson graduated cum laude with a BA degree in geology from Occidental College in 1980 and received his MBA degree from Anderson Graduate School of Management at UCLA in 1990. He devotes full time to portfolio management and securities analysis.

Dick’s Sporting Goods	1.56
ICON	1.54
Core Laboratories	1.52
Concur Technologies	1.49

Fund holdings are subject to change and are not recommendations to buy or sell any security.

Second Quarter Performance Review

Performance. Volatility in the stock market came roaring back in the second quarter, as investors faced multiple signs that the global economic recovery might not be as durable as hoped. The performance of the TCM Small Growth Fund for the quarter ended June 30, 2010 was -11.00%. For longer term performance, please see "Performance."

Attribution. After a reasonably stable start, the stock market sold off due to growing fears that macroeconomic stresses would slow the pace of future economic growth. In addition, the dollar strengthened in a flight to safety due to the Euro crisis, and as a result the stock prices of companies exposed to world growth drivers suffered the most. While we took action to reduce the fund's weighting in stocks that are highly exposed to European economies, the Euro and a possible slowing in emerging market growth, the portfolio struggled against the benchmark due largely to underperformance of stocks with more international exposure. With respect to economic sector attribution, relative performance was attributable to negative stock selection in Industrials, Material, Consumer Discretionary and Financials, offset by positive selection in Health Care and Technology.

The top contributor for the quarter was CyberSource, a provider of electronic payment and risk management solutions. The company announced mixed revenue and earnings guidance for 2010 compared to analysts' estimates. While the stock was a detractor to first quarter performance, we maintained our position in the stock because of positive trends in e-commerce. In April, the company announced a sale of the company to Visa, and we have sold our position. Another contributor to performance was Core Laboratories, which provides reservoir management services to the oil and gas industry. The company has reported positive earnings surprises and has continued to raise guidance. The stock has been a long term holding in the portfolio, yet we do trade around the position size due to changes in valuation and fundamentals.

Our biggest detractor to performance in the second quarter was Orient-Express Hotels, which owns and operates over 40 hotels in 24 countries. As discussed above, we have reduced the fund's exposure to companies with significant global revenue concentration and Orient-Express is one of those names. We continue to maintain a position but at a reduced level until we have greater confidence in the stability of the global economy. Another stock that hurt performance in the recent quarter was Alpha Natural Resources, a supplier of metallurgical ("met") and thermal coal. While a significant contributor for several quarters, the stock price has come under pressure in the second quarter due to growing fears of a demand slowdown that would decrease met coal prices. We continue to hold the position, since the market is pricing in a much worse scenario than we think is likely, but are cognizant of the risks associated with a stock whose performance is impacted by perceptions of economy growth and commodity prices. The effect of our sector weights was positive for the quarter, as our underweight to Healthcare and Consumer Discretionary helped performance and our cash position contributed to relative performance in such a negative quarter.

The Fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The statutory and summary prospectuses contain this and other important information about the Fund, and it may be obtained by calling 1-800-536-3230. Please read it carefully before investing.

The Fund invests in smaller companies, which involve additional risks such as limited liquidity and greater volatility than large capitalization companies.

P/E is the price of a stock divided by its reported earnings per share. Forward P/E is the estimated P/E of a stock for at least the next four quarters. Long-Term Future Growth Rate is the estimated growth rate of the company's earnings over at least the next three years. Return on Equity is the income available to common stockholders for the last fiscal year divided by the common equity and is expressed as a percentage. Price to Book is the current price of a stock divided by its latest book value per share. Forward P/E/LT-Growth Rate is the estimated future P/E of a stock divided by its Long-Term Future Growth Rate.

The Russell 2000 Index consists of the smallest 2,000 companies in a group of 3,000 U.S. companies in the Russell 3000 Index, as ranked by market capitalization. The Russell 2000 Growth Index is an unmanaged index representing those Russell 2000 Index companies with higher price-to-book ratios and future projected earnings according to Russell Investments. Growth stocks typically are more volatile than value stocks; however, value stocks have a lower expected growth rate in earnings and sales. One cannot invest directly in an index. Lipper Analytical Services, Inc. is an independent mutual fund research and rating service. Each Lipper average represents a universe of funds with similar investment objectives.
